Chapter XXIII

Defence and Internal Security
CHAPTER XXIII

Defence and Internal Security

I. INTRODUCTION

The maintenance of peace and security within the country and the region is important for the progress and prosperity of the country. Defence and internal security programmes were formulated with the objective of safeguarding the country against external aggression and maintaining law and order. The protection of the economic interest of the country in the Exclusive Economic Zone (EEZ) is a new element included under these programmes. During the Fifth Malaysia Plan period, emphasis will be given to the consolidation of existing programmes and the intensification of training for the security personnel.

II. PROGRESS, 1981-85

Defence

During the period 1981-85, there was a marked expansion and modernization of the armed forces and the strengthening of the capabilities of the army, navy, and air force to meet any possible threat to the security and sovereignty of the country. Emphasis was given to the enhancement of combat and support capabilities for all the three services through various measures, including the procurement of new equipment and weapons.

Another component of defence programmes was the provision of physical facilities. Several bases and camps, including the Royal Malaysian Naval Base at Lumut and the Royal Malaysian Air Force Base at Subang were established, while many of existing ones upgraded. Additional training facilities for the combat forces as well as the repair and maintenance personnel were provided to improve the combat efficiency of the soldiers.

Apart from the regular forces, volunteer reserve units, such as the Territorial Army and Reserve Officers Training Units, were also expanded, thereby increasing the participation of the general public in defending the country. Volunteer reserve units of the army, navy, and air force were provided with additional equipment and training to improve their performance.
Internal security

Internal security programmes, which included the police, anti-dadah, civil defence, Ikatan Relawan Rakyat Malaysia (RELA), and Rukun Tetangga, played an important role in maintaining law and order. Efforts were made to improve the efficiency and effectiveness of the police force through its expansion as well as the acquisition of various types of modern equipment. The training facilities were also expanded and improved to create more disciplined and dedicated police personnel. In addition, new police stations and police field force camps were constructed, while existing ones expanded. The police air unit was improved in order to provide better air surveillance, aimed at combatting smuggling, as well as pirating activities, particularly along the coastal areas of Kelantan, Terengganu, Sabah, and Sarawak.

Measures were taken to promote and maintain closer rapport between the police and the general public to combat crime. Towards this end, the Community Constable (KONMAS) system was introduced in selected areas in Georgetown, Ipoh, Johor Bahru, and Petaling Jaya, while the Koban system was experimented in residential areas with high incidence of crime. Under the KONMAS system, the policemen patrolled the areas outside their stations not only to prevent crime but also to establish good relationship with the residents in the neighbourhood. The Koban system required the police personnel involved to live in, enabling them to establish good relationship with the residents. An in-depth study was being undertaken by the Government to ensure the compatibility of both the KONMAS and Koban systems with local conditions before implementation.

In 1983, the Government adopted a new approach in its effort to fight dadah abuse which posed a threat to national security. The Anti Dadah Committee and Anti Dadah Task Force, both under the National Security Council, were established to co-ordinate and monitor the anti-dadah programmes of various agencies. At the state and district levels, the State Security Working Committee and the District Security Working Committee were also responsible for organizing anti-dadah operations at their respective levels. Stricter laws were also introduced and heavier penalties imposed on dadah-related offenders. The National Anti Dadah Five Year Action Plan, 1985-89, formulated in 1985, was aimed at reducing the dadah trafficking and addiction problems during the period. The major programmes under this Plan included prevention of dadah abuse, reformation of offenders, manpower development of related agencies, and international co-operation.

Seven treatment centres, consisting of three one-stop centres and four rehabilitation centres, were established under the Ministry of Home Affairs. The one-stop centres were located at Sungai Petani, Sungai Siput, and Tampin, while the rehabilitation centres were at Besut, Bukit Mertajam, Sungai Merchong, and Tampoi. The centre at Sungai Merchong in Pahang, based on the work brigade concept, was a joint effort between the Government and the Pilgrimage Fund and
Management Board (LUTH). In addition to treatment and rehabilitation, dadah abusers also underwent specialized training at the centre. A new approach to the treatment and rehabilitation of dadah abusers was introduced by lengthening the duration of training from six months to two years. Programme under this approach involved various physical and mental activities, including detection, treatment and detoxification, counselling, military-style drill, vocational training, job placement, and follow-up care.

The production and trafficking of dadah had an international dimension. Dadah abuse and trafficking spread rapidly over wider geographical areas. Consequently, the problems of transit countries, such as Malaysia, became more serious and posed a threat to the stability of these countries. In view of this, a national policy and strategy was formulated and efforts were made to seek the cooperation of other countries in the war against dadah. Malaysia played a leading role in the prevention and control of dadah abuse and illicit trafficking, and initiated regional co-operation in the Association of Southeast Asian Nations (ASEAN) region, including the realization of an ASEAN Resolution entitled International Strategy of Combating Drug Abuse and Trafficking. In addition, Malaysia also participated actively in meetings and debates at the United Nations on narcotic drug control during the Fourth Malaysia Plan period.

During the period 1981-85, 12 civil defence units were established in selected areas to provide emergency assistance in cases of natural disasters and calamities. Training programmes were also expanded to improve the performance of the civil defence units such as in the area of fire prevention as well as evacuation and care for the victims of various disasters.

*Ikatan Relawan Rakyat Malaysia* (RELA) was established to assist the security forces to defend the country. Its main function was to provide area security surveillance, particularly at strategic locations. RELA units were formed in the rural areas or villages to assist the people in resisting any subversive or undesirable elements which threatened the security and stability of the country. In 1982, RELA was strengthened and expanded as the third line defence for the country, after the armed forces and the police force.

The new approach of the *Rukun Tetangga* scheme, introduced in 1982, emphasized on neighbourliness among the residents. With the promulgation of the Essential (Rukun Tetangga) (Amendment) Regulation in December, 1982, the scheme was classified into three categories on the basis of crime incidence in the area. In crime-free areas, the emphasis was on various activities to promote neighbourliness among residents, while in the areas with medium incidence of crime, residents above 15 years of age were required to register for the scheme. In areas with high crime incidence, the scheme emphasized not only registration of residents aged 15 years and above but also patrol duty for those in the 18-55 age group.

547
III. PROSPECTS, 1986-90

Defence

A long lead time will be required to build a more credible force. It will be necessary to develop a balanced force that is small but effective and to incorporate other national resources and infrastructure into the total defence system. In line with this new direction, the utilization of existing manpower and resources will be optimized and their combat capability enhanced with effective modern weapons. With regard to physical development, priority will be given to continuation projects. Housing for the armed forces personnel as well as training facilities to improve combat and discipline in the armed forces will also be given priority.

Internal security

The capability and performance of the police force will be improved to maintain law and order. In addition, training programmes will continue to be improved, police stations established, and modern equipment acquired to increase efficiency and effectiveness of the force. The KONMAS system will be introduced in additional selected areas of Georgetown, Ipoh, Johor Bahru, and Petaling Jaya to further improve the security of these areas.

The fight against dadah abuse will be intensified with a view to eliminating the inflow of dadah and its abuse in the country. An integrated approach will be implemented against dadah abuse, in line with the National Anti Dadah Five Year Action Plan, 1985-89. Priority will be given to the preventive programme aimed at eliminating dadah abuse among youths. Treatment and rehabilitation programmes will also be increased with the construction of new rehabilitation centres and the upgrading of the existing ones. In addition, 12 follow-up care centres will be established throughout the country to provide counselling and after-care services for ex-dadah abusers. At the international level, Malaysia will continue to co-operate with other countries, particularly within the ASEAN region, in the war against dadah abuse and illicit trafficking.

With regard to civil defence, more units will be established in schools and residential areas, and training will be provided. Residents will be encouraged to join RELA and training programmes will be intensified through the establishment of new training centres. Steps will also be taken to extend the Rukun Tetangga scheme to Sabah. In Sarawak, neighbourhood activities will be carried out through the Community Relations Programmes which constitute the first phase of the Rukun Tetangga scheme.

IV. ALLOCATION

The development allocation and estimated expenditure during the period 1981-85 and the allocation for the period 1986-90 for defence and internal security are as shown in Table 23-1.
